

BRYSTON

A Lifetime of Music

MEMO: To All Bryston Customers

SUBJECT: First Impressions on Bryston Model T Loudspeakers

First Impressions – Bryston Model T Speakers (Nov 2012)

With slightly over twenty-four hours of run-in time, the Bryston Model Ts have really impressed me in the following ways:

- First - The full range capability is unmistakable! The low frequency clarity and energy are quite remarkable. The model T's allow me, for the first time, to experience very low frequency information on several of my favorite recordings. This is really substantial considering these speakers retail for \$6,500 a pair in the USA.
- Second - The clarity, openness, and airiness of the top octaves are exceptional. The listening room is filled with these qualities especially on well recorded material. This enables a much wider sweet spot than I have been accustomed to.
- Third - The upper bass and lower midrange fullness, punch, and clarity are very noteworthy. These aspects inject new life and vitality to the music.
- Fourth - The overall frequency range exhibits great clarity and excellent focus. This compares favorably with the latest generation of popular panel speakers but with substantially lower frequency capability.

- Fifth - The speaker placement has not been fussy to get great sound. I was able to get the model Ts making great music with the minimum of effort.
- Sixth - Model T speakers easily compete with speakers costing considerable more.
- Please note - Be sure to experiment with the provided isolation feet, spikes, and your favorite footers. You will be rewarded many times over with improved sound.

After full run-in is completed, I will report my follow-up listening results.
