A Lifetime of Music

MEMO: To All Bryston Customers SUBJECT: Bryston WiFi Dongle Accessory Kit

September, 2017

The Bryston WiFi Dongle Accessory Kit is a product that can be purchased by itself or with the purchase of a Bryston BDP Digital Player.

The BDP will gain WiFi capability, no longer requiring the user/installer to run a network cable, setting up a WiFi bridge, or Powerline AV kit.

The Bryston WiFi Dongle Accessory Kit will be available by September and will correspond with the release of our S2.36 firmware, which among other things will include comprehensive support for the accessory kit as described in the manual (a preliminary copy is linked below).

The WiFi dongle included in this kit is capable of up to 300Mbps 802.11n and will work with 802.11a/b/g/n wireless capable networks. Most 802.11ac networks should be backwards compatible with at least one of these standards. An 802.11ac dongle wasn't chosen for a variety of reasons, the primary of which was the limitation of a USB 2 interface.

The kit will include:

- WiFi Dongle
- 3 foot USB extension cable
(to avoid blocking neighboring USB Ports and positioning the dongle away from gear if needed)
- Instructions

Please see the following link for the manual:
