James,

Sorry we forget send you some translated sentences from Audio Video Bryston BDP-1 and BDA-1 Review

REVIEW BRYSTON BDP-1 Digital Player and BDA-1 DAC as System

I must admit that at the very beginning I approached somewhat sceptically the Bryston approach to digital audio playback.

However, it appears that this set of synergistically acting pair, combined with traditional digital cables, is one of the best digital sources that you can buy today, not only for the 17 high resolution music files you own, but also for the 20 or 25 thousand CD's available. The music material ripped from CD sounds very musically not digital, offering large-scale sound so-called with terrific air and breathing.

During High - Resolution 88,2-192kHz listening Bryston set has such significant advantages over CD players that you really want to consider the purchase, rather than a comparable priced compact player.

Highlights:

- Sounds completely non- digitally – excellent for diehard fans of vinyl.\
- The FLAC 24/192 of - J.S. Bach - Mass B-minor, Dunedin Consort was incredibly suggestive vocals in the listening room ... sound fidelity of old instruments was extraordinary incomparable with any recording, I knew from the CD version, played on any CD player.
- High resolution file listening takes you to a higher level of musical initiation. You get not only more information and space but an increase in the involvement of the listener and this is, after what really counts!
