SUBJECT – BP25 DAC

FROM: BP25P Jim [slev@telusplanet.net]
SUBJECT: BP25DA upgrade
T0: James Tanner

Hi James:

Just a quick note to let you know that I got my upgraded BP-25 with DAC back today.

It definitely is a treat; its overall sonic character is not unlike my Arcam 7se, but with noticeably better dynamics and resolution, particularly in the upper registers. Ironically, the difference between the Arcam and the Bryston DAC reminded me of the difference between the B60 and the BP25/3B-ST, which I attributed to the BP25's lower noise floor. A particularly pleasant surprise was how well the BP25 DAC works with my Audiotron digital audio receiver – my library of 320kb/s VBR compressed music sounds amazing.

As well, I was *absolutely delighted* with how carefully the phono stage was removed from the preamp, and packaged for shipment to me. Both the phono stage as well as the front and rear fascia panels were shipped to me securely wrapped in bubble wrap; the front and rear fascia were also carefully wrapped in paper. I also received a separate bag with a collection of passive components and the grounding terminal.

Your team is clearly passionate about the work they do, and it certainly shows with the care that was taken with this upgrade. Please pass on my thanks to them – I really appreciate their efforts.

Jim Slevinsky
