

## **MEMO - Bryston Customer Feedback - Norway**

### **SUBJECT – Bryston 4B SST**

DATE: March 5, 2006

Good day to you Mr. Tanner, I was given your mail address by Tor at Lyric Hifi (Oslo, Norway) - so I could tell you and Bryston about my experience with the 4B SST power amplifier.

And what an amplifier it is!! I have only had it for one week, but I think it is safe to say that I am deeply impressed. The first 72 hours I had it pushing air (with a lot of classical music) with approx. 60 -70 % load in a closed room, then I started to listen to the thing. I was more and more amazed about the resolution, the powerful dynamics, the transparency,

the monster control of bass (never heard anything like it), the increasing sweet, delicate and airy treble, full and bodied mid-band, and of course great timing and speed. And its getting better and better...so far. Solid state does not get much better than this.

I have the Anthony Gallo Reference 3 speakers in my set-up, these are not very hard to drive properly - but they have never sounded like this before. So my conclusion is that the 4B SST and Gallo is indeed a perfect match, the enormous power reserves makes it possible to have high quality music experiences on a fairly low volume, as well as on a dangerously high volume).

All in all, I now understand why you have continued to develop this amp for over 30 years – it's a fantastic amplifier regardless of price, and I suspect that I will have to spend 2 to 3 times more money in order get anything significantly better. Or maybe even more.

Thanks for a great product - and best of luck with future projects!

Best regards,  
Ole Dokka, Norway.
