

## **BRYSTON COMPATIBLE UNIVERSAL LEARNING REMOTE CONTROLS**

The following two products have been tested here and are known to work effectively with Bryston infra-red remote controlled units. Both are available over the Web at "X10.com" which is based in the USA but has distributors all over the world who carry versions of these products that are compatible with local regulations and power grids.

Universal learning remote control: **UR24A** \$49 Cdn

This remote can be programmed via three digit codes to emulate hundreds of different remotes and it can "learn" or capture the IR transmissions of most other remotes. The Bryston remote can be "learned" by the UR24A.

Universal learning remote control: **Radio Shack #15-1924** This unit is almost identical to the one above. Approx. \$60 Cdn.

Remote control extender: **PM5900** \$59 Cdn

Sometimes sold as two separate pieces;

**ST539** IR to RF transceiver

**RE549** RF to IR transceiver

As these units plug in to the wall power outlets they must be acquired for the particular region in which they are to be operated. International resellers can be located at [www.X10.com](http://www.X10.com) <<http://www.X10.com>>. Two European vendors are also listed below.

X10 USA [www.x10.com](http://www.x10.com)
